

RESIDENT PRESENTATION FORMAT

As part of your rotation in Geriatrics, residents are expected to do a presentation on one of the following topics: Dizziness, Falls, Osteoporosis or Urinary Incontinence. CHF, Parkinson's disease and/or Delirium may be added to the list of choices if the other topics have already been selected. This presentation will take place in a one-hour timeslot. It should be a 30-40 minute presentation so that there is time for interaction and questions. Below please find a suggested outline. You can find pertinent references for your presentation on our website within the orientation materials under "Resource Materials".

OUTLINE

1. Limited basic science and pathophysiology (if needed, 1-2 slides only)
2. Scope of the problem (1 slide)
3. Clinical approach to the problem
4. Investigations and why they may be indicated
5. Treatments - both non-pharmacological and pharmacological
6. Take Home messages
7. Please try to include a case for discussion/reference
